

**Gain valuable
national market exposure
with
Surgical Physician Assistants
who specialize in
Cardiac, Thoracic, and
Vascular Surgery**

By becoming a Corporate Sponsor of the APACVS, your company will receive excellent exposure within the physician assistant profession. Cardiovascular surgery is the #1 surgical subspecialty for surgical physician assistants. In the operating room, PAs first assist, harvest saphenous veins for bypass grafts, and close chest or abdominal wounds. They frequently perform invasive procedures such as chest tube insertion; thoracentesis; insertion of arterial, central venous or thermodilution monitoring lines; as well as insertion of intra-aortic balloons and organ procurement.

The physician assistant profession will be an integral part of health care reform. Surgical PAs make direct product recommendations to the surgeons they work for and have prescription privileges in forty-four states.
